

I am outraged that the U.S. government is trying to restrict satellite radio. With so many important issues facing us that we need our government to address, they chose to focus on a valuable service that WE PAY FOR!! I am a student, I live away from home, and I travel on the road a lot. I love being able to get traffic and weather updates whenever I need them. I love being able to listen to stations that regular radio doesn't offer. Such as news, comedy, classical, and jazz. And I enjoy being able to listen to ONE station no matter where I am and not having to surf a ton of worthless stations just to find something decent to listen to. PLEASE reject the NAB's petition. I support XM radio.
